 LinkedIn: www.linkedin.com/in/vijaykumar-kancharla-6713937a/

Skills Summary:

- + Over 7 years of progressive experience in Java and J2EE technologies.
- + Proficient in Core Java and Java 8, with hands-on experience in JDBC, Servlets, and JSP.
- + Hands on experience in Coding JDBC, Servlet and JSP pages.
- + Skilled in developing Web Module using Spring MVC framework, Spring Data, Spring Boot and Spring Kafka.
- + Experienced in ORM mapping using Hibernate.
- + Familiar with front-end development using HTML, JavaScript, and React.js, with a focus on integrating UI components into backend workflows.
- + Working knowledge of RESTful API development and microservices principles, with hands-on experience in building modular services using Spring Boot and integrating APIs across components.
- + Practical experience with AWS cloud services and Kafka messaging system.
- + Hands on experience in using Spring Tool Suite (STS), IDE Eclipse and IntelliJ.
- + Strong RDBMS skills with SQL, particularly in databases like MySQL.
- + Good Knowledge on AI Tools like Copilot.
- + Experienced in Agile development environments

Core Competencies:

Languages	: Java, HTML, XML, JavaScript, React JS.
Web technologies	: Servlets, JSP.
Frame works	: Spring, Kafka
ORM Tool	: Hibernate
Utility/IDE	: Spring Suite Tool (STS), Eclipse, IntelliJ
Servers	: Tomcat 8.0
Operating System	: Windows
Database	: MySQL
AI Tools	: Copilot
Management Tools	: Jira, Confluence, OpsGenie
Testing Tools	: Junit, Mockito
Version Control Tools	: Git Hub

Education Qualification

B. Tech in Electronics and Communication Engineering from Jawaharlal Nehru Technological University, Hyderabad with 70 % (2010-2014)

Master of Science in information Technology (MSIT) from International Institute of Information Technology, Hyderabad (2015-2017).

Professional Experience:

- Worked as Developer II for **RealPage Inc.** from January 2022 to July 2025.
- Worked as a Software Developer for Agility E Services from January 2020 to January 2022
- Worked as a Software Developer for Velankani from July 2017 to February 2019.

Project Details:

Project 1:

Project Name : Propertyware

Client : RealPage

Environment : Java, JSP, Spring Boot, Micro Services, Hibernate, kafka, AWS

Team 6

Database : MySQL

Role : Developer II

Company : RealPage

Duration : January 2022 to July 2025.

Project Description:

Propertyware is a customizable property management software platform designed for property managers working with various portfolio sizes and property types (single family and multifamily homes) to streamline the process for seamless management of leasing, maintenance, financials, and tenant relations all within a single platform. Additionally, this platform provides lot of customization such as dashboards, reports, variables and open API's which allows the customer to analyze every single of their processes more efficiently.

Roles & Responsibilities:

- Gathered and analyzed requirements to support the customization and optimization of Propertyware's property management features, ensuring alignment with business needs.
- Involved in design of user-interface and developing input screens and forms.
- Replicated and adapted business logic to create consistent functionalities across Propertyware modules, such as leasing, maintenance, and financial reporting.

- Designed and developed the presentation layer which includes different service, database layers and various Controller classes using in Spring MVC framework to support Propertyware web-based features.
- Managed the deployment of developed web components on Apache Tomcat servers, ensuring smooth integration with Propertyware's platform
- Applied and adhered to industry-standard design patterns to ensure scalable and maintainable code for Propertyware's custom solutions.

Project 2:

Project Name : DocX

Client : Agility

Environment : Spring Mvc, ReactJs, Jenkins, Maven, Jira

Team : 5

Database : MS SQL

Role : Software Developer

Company : Agility

Duration : January2020 to January 2022

Project Description:

DocX is a document transfer application that supports three communication modes: Email, FTP, and UNC. Documents are delivered to users based on predefined matching rules

Roles & Responsibilities:

- Collaborated with stakeholders to gather and analyze functional and non-functional requirements.
- Actively participated in release planning and deployment activities across staging and production environments.
- Diagnosed and resolved production issues, ensuring minimal downtime and prompt root cause analysis
- Engaged directly with end users to understand pain points and provide timely solutions
- Delivered enhancements and new feature implementations based on evolving business needs
- Authored comprehensive documentation including User Guides, Functional Requirement Specifications (FRS), and detailed Test Cases to support QA and UAT processes.

Project 3:

Project Name: Net Discovery Engine

Client: Ericsson

Environment: Java, Spring Core, Rest API, Spring JDBC

Team Size : 4

Database : MySQL

Role : Software Developer

Duration : July 2017 to Feb 2019

Project Description:

Network Adapters read each network element and extract the physical and logical inventory, pulling the data into a single, network topology view.

Roles & Responsibilities:

- Participated in daily Scrum meetings and provided regular updates on task progress and blockers.
- Analyzed and interpreted functional specifications and application requirements to ensure accurate implementation.
- Developed SNMP-based services using Spring to retrieve data from network elements, with persistence handled via Hibernate ORM
- Utilized Jenkins to design and implement CI/CD pipelines; managed build processes using Maven Responsible for deploying the developed web components on the Tomcat.
- Engineered a custom testing framework to validate XML device responses, leveraging JAXB, TestNG, XPath, and Java Reflection for dynamic attribute verification.
